Summary

Software engineer who designs, builds, and ships complete products. My depth is backend: REST APIs in Python (FastAPI) and Node.js on PostgreSQL and PostGIS. I also build the rest of the product, with TypeScript, React, and Next.js on the web and Flutter on mobile. As CTO and sole engineer at Yeneb, I designed and built a delivery platform with 250+ FastAPI endpoints, real-time courier tracking, and three Flutter apps. I have led a five-person team on an ML-driven transport project. BSc in Software Engineering, A2SV graduate, 900+ algorithm problems solved.

Technical skills

Backend	FastAPI, Node.js, Express, NestJS, REST API design, WebSockets (Socket.IO), Celery background jobs, JWT/OTP authentication, RBAC, payment and media integrations (Chapa, Cloudinary)
Databases	PostgreSQL, PostGIS, Redis, MySQL, MongoDB, SQLAlchemy 2.0
Languages	Python, TypeScript, JavaScript, Dart, SQL
Frontend	React, Next.js, Flutter, BLoC, responsive UI, REST and WebSocket clients
Tools and practices	Git and GitHub workflows, GitHub Actions CI, Docker, Sentry error monitoring, TDD, Clean Architecture, API security, deployment

Experience

Chief Technology Officer · Yeneb

May 2026 – Present

Addis Ababa, Ethiopia

- Proposed building Yeneb's delivery super-app from scratch to company leadership, and lead it end to end as sole engineer: architecture, backend, database, web, mobile, infrastructure, and technical product decisions.
- Designed and built a FastAPI backend with 250+ endpoints on PostgreSQL, PostGIS, Redis, and WebSockets, covering real-time order and courier tracking and geospatial courier matching.
- Built AI-powered demand recommendations for couriers.
- Integrated online payments alongside cash on delivery, with a courier wallet that settles cash orders.
- Built three Flutter apps (customer, courier, supplier) with multi-language support, plus a Next.js web app and operations console.
- Set up CI/CD and deployment with Docker and GitHub Actions; own database design, requirements analysis, and technical documentation. The platform is preparing for launch.

Full-Stack Engineer and Backend Architect · HealLink

Feb 2026 – Aug 2026

Addis Ababa, Ethiopia · heallink.onrender.com

- Built asynchronous APIs for a healthcare platform covering provider onboarding and diagnostic workflows.
- Integrated the Chapa payment gateway, and Cloudinary for secure medical document storage.
- Implemented QR-based patient check-in with automated notifications, and a two-tier government verification dashboard.
- Built provider analytics on appointment trends, peak occupancy, and no-show rates.

Team Lead and Backend Developer · MoveMate (graduation project) Sep 2025 – Jun 2026
Addis Ababa University

- Led a team of five building an AI-powered public transport tracking system for Addis Ababa: task planning, code review, and delivery.
- Trained a RandomForestRegressor on 140,000+ GPS records for ETA prediction ($R^2 = 0.93$, MAE ≈ 4.6 min).
- Designed a demand-based rerouting module and a nightly APScheduler retraining pipeline.
- Compressed the production model by 99% (2.8 GB to 17 MB) with no meaningful accuracy loss.

Full-Stack Developer · Mo-Creatives (freelance) 2023

- Delivered a company website with a custom CMS and a Next.js frontend for a client.
- Implemented secure admin workflows and role-based content management.

Projects

SVM Booster. Full-stack YouTube growth platform (React, Node.js/Express, MongoDB) with three-tier RBAC, real-time support chat over Socket.IO, and OCR-based subscription verification.

Saddeeqa. Flutter implementation of the Ethiopian board game, with a Minimax and Alpha-Beta AI opponent at multiple difficulty levels.

Education

BSc, Software Engineering, Addis Ababa University Jun 2026
Coursework: Data Structures and Algorithms, Web and Mobile Development, AI, Machine Learning

Achievements and leadership

A2SV graduate. Africa to Silicon Valley, a Google-backed program for top African software engineers.

Algorithmic problem solving. 900+ problems solved on LeetCode and Codeforces.

Vice President, FOCUS Finfinne. Led cross-functional teams and student community initiatives.

Volunteer tutor. Taught Math and English at Dembi Dollo Full Gospel Church.
